

Referral Guidance for Surgical Oncology Patients

Lymph node biopsies- Surgical Oncology

Abdominal issues in cancer patients:

1. Patient established with UNMC surgical oncology division for malignancy, seen within three years, and issue is related to previous intervention (for example, SBO) - *Surgical oncology*
2. Presenting manifestation related or likely related to primary malignancy - *Surgical Oncology or to the appropriate Cancer focused surgery team (e.g., colorectal)*
 1. If discovered intraoperatively, Surgical Oncology consultation is at discretion of EGS staff
 - i. If surgical oncology assumes care intraoperatively - *Surgical oncology*
 - ii. If malignancy determined to not change treatment strategy - *EGS*
3. General surgical conditions (symptomatic cholelithiasis or acute/chronic cholecystitis, acute appendicitis, incarcerated hernia, small bowel obstruction) in patient with active cancer issue (on or off active treatment) or history of malignancy - *EGS*
