 - T/Th/Sat—Orthopedic Spine Service
 - PerfectServe: Orthopedic Academic Service TNMC
- Urology
 - PerfectServe: Urology Academic Service (Genitourinary-GU)
- Vascular Surgery
 - PerfectServe: Vascular Surgery Academic Service TNMC

In general, pediatric specialists will manage injuries in pediatric trauma patients <15 years of age with some variability between service lines and attendings. Pediatric surgery should be utilized for patients <15 years of age for general traumatic injuries. In patients 15 years and older, adult general surgery subspecialties (MIS, CRS, surgical oncology) may be consulted for second opinions/area expertise if needed but may defer consultation to pediatric surgery in certain circumstances (i.e. congenital issues, complex/prior pediatric surgery history, etc). Transplant/Hepatobiliary Surgery should be considered for the first call in the setting of emergent complex traumatic hepatobiliary injuries.

Pediatric attendings will be contacted by his/her respective resident. If there are questions or uncertainty involving the case, the trauma attending should reach out and discuss case with the on-call attending for that specific specialty

Decision to engage pediatric orthopedic specialists will be based on injury, skeletal maturity and discretion of orthopedic attending on call. If orthopedic injury is isolated and transfer to Children's hospital for management is requested, the trauma attending should be notified and agree to transfer. The pediatric TMD should also be notified of the plan to transfer a patient

General Pediatric and Pediatric Subspecialties:

- Pediatric Floor and ICU (main desk): 402-559-7400
- PICU/Pediatric Lead Nurse (Volte): 531-557-3201
